

CAREER OBJECTIVE

Software Engineering student and startup founder with experience in AI systems, full-stack development, embedded technologies and DevOps. Proven ability to build scalable products, lead technical teams and deliver real-world solutions. Seeking opportunities to apply engineering and entrepreneurial skills in high-impact environments.

RELEVANT PROJECTS

UTS Rocketry

Work on launch and landing PCBs and related software for the UTS Rocketry Team.

AI Trading Bot

Developed and trained a Python and machine-learning-based foreign exchange trading bot.

Inventory Management App

Used C, Python, Java, React and SQL, with VS Code and Supabase for data storage.

CyberScanner

Developed a cybersecurity scanning tool capable of packet analysis and device-information assessment for malware and security risks.

PROFESSIONAL EXPERIENCE

Founder & CEO

January 2026 – Present

Vaylo Technologies

- Built an AI-powered business platform integrating CRM, inventory, automation and workspace tools into a single product.
- Led a team of developers and coordinated MVP development and feature delivery across frontend, backend and AI components.
- Developed and deployed the MVP using React, Node.js, Supabase and AI APIs to support end-to-end business workflow automation.
- Designed scalable system architecture supporting multi-user workspaces and role-based access control.

DevOps Engineer Intern

July 2025 – November 2025

Beachware

- Configured cloud deployment and infrastructure automation tasks while supporting server operations.
- Resolved more than 20 networking issues and coordinated with vendors on installation and delivery while assessing network performance and technical issues.
- Collaborated with five technical team members to analyse CI/CD pipeline products, participated in technical discussions and provided suggestions to senior management.

Safety Operations

October 2024 – January 2026

ABC Services

Collaborated with Electrical, Signalling & Communication and Software teams to coordinate testing for 24/7 coverage.

Diagnosed system issues and streamlined testing workflows, reducing troubleshooting time by 15% and improving test coverage efficiency.

Produced documentation and reporting to support technical team alignment while working in teams of up to 15 people.

Team Management

February 2024 – November 2024

Engineers Without Borders (EWB), UTS

Led a team of five students in the Engineers Without Borders Challenge, managing research and deliverables across project phases.

Initiated problem-solving discussions when challenges arose, contributing to innovative solutions and a cohesive final submission.

Delegated tasks and monitored progress using shared tools to keep the 12-week project on schedule.

CORE SKILLS

Languages & Frameworks

Python, Java, JavaScript, React and SQL.

Tools & Platforms

Supabase, Git, Docker and AWS.

Specialisations

Cybersecurity fundamentals, IoT development, embedded systems (ESP32), network security, software development and AI integration.

Leadership

Experience leading university and startup teams and coordinating work in professional environments.

Communication

Experience communicating with technical teams, vendors and stakeholders through technical discussions, radio and email.

EDUCATION

Bachelor of Engineering (Software & Mechatronics)

January 2024 – December 2027

University of Technology Sydney (UTS)

Coursework includes Secure Software Development, Computer Networking, Embedded Systems and AI Applications.

CompTIA Network+ / Security+ Studies

February 2025 – July 2025

Developed knowledge in network configuration, security principles and threat mitigation.

REFEREES

Provided upon request.
